TWO-LANE GOVERNANCE • LAYMAN SLIDE VIEW

Mandate: $5.0M USD | Active Sleeve: $1.5M Pairs | Cash Reserves: $3.5M Cash

The Two-Lane Architecture: Who Holds the Steering Wheel?

Emotionless math code executes trades. Multi-agent AI audits the evidence. AI holds zero order authority.

STEP 1 • HUMAN BOARD — **The Student Team (Team Owners)**

Sets the **$5M Capital Mandate**, selects the **V~MA Pairs strategy**, and freezes **safety limits** before trading begins ↓

LANE 1: THE RACE CAR (100% MATH CODE)

Drives the Fund • 100% Trade Authority

A — Pairs Strategy Engine (Kalman + OU Model)

Calculates when **Visa & Mastercard drift apart** and sizes a balanced dollar-neutral Long/Short pair trade.

↓

• — Automatic Safety Brakes (Tiered Risk Envelopes)

12% Drawdown: Cuts trade sizes by 50%. **25% Drawdown:** Full emergency halt. Scales both legs equally so hedges never break.

↓

B — Tamper-Proof Trade Log & Shadow Book (PhantomBook)

Logs every approved trade into an **immutable ledger** and tracks exact dollars saved by the safety brakes.

LANE 2: THE PIT CREW (MULTI-AGENT AI)

Audits & Explains • 0% Trading Power

A — AI Strategy Inspector (Pairs PM Analyst)

Has **view-only access** to engine sensors to inspect signals, check spread health, and explain why the trade was proposed.

↓

• — AI Committee Chair (CIO Copilot)

Synthesizes strategy memos, monitors overall portfolio exposure, and reviews how much capital the safety brakes protected.

↓

B — Automated Digital Lie Detector (Anti-Hallucination Gate)

Checks every AI number against the Trade Log. **If even one decimal point is wrong, the AI report is rejected.**

Takeaway: Math Code executes trades • Multi-Agent AI writes the audit • AI is never allowed to place trades.
